

Direction Neutral Amplifier 1800

NOS

Size: 2,450 employees globally

Industry: Telecommunications operator

Location: Lisbon, Portugal

NOS is a Portuguese communications and entertainment group, resulting from a 2013 merger between Zon Multimédia and Optimus Telecomunicações, two of the country's largest communications companies.

NOS offers state-of-the-art fixed and mobile solutions, television, internet, voice and data for all market segments. Today, NOS provides all services throughout the national territory and to the Portuguese market through its HFC, FTTH and GSM networks.

13 Years of Partnership

Technetix is proud to recognise 13 years of partnership with NOS, supplying the company with RF products since 2011.

In that time, we have provided numerous RF products for distribution to the HFC network in Portugal, ensuring optimum standards in quality.

In 2023, NOS put out tender for a booster amplifier on behalf of their clients for a number of end-of-network segments. The size of the segments within the provision area was large, and weak signal affecting some of them was not fulfilling NOS's service potential or the desired quality of service to end users in the area.

Technetix' DNA - DIRECTION NEUTRAL AMPLIFIER 18DB 1800MHZ (19013579) is capable of amplifying weak signals without losing signal quality: an ideal solution for this issue. Easy-to-install in-field and upgrade-ready for future network

development, the amplifier is a cost effective, high-quality and future-proofed combination of strong capability and low-intensity installation.

“NOS are immensely satisfied with this solution, reporting an improvement in end user signal, and have included the Technetix DNA on their list of approved materials.”

Technetix continue to work on providing other products, to fulfil customer needs that have been identified by NOS. Several ongoing projects have already undergone testing.
